

# Electric Vacuum Comparator

## General information about ADPC-7015V Electric Vacuum Comparator

Electric Vacuum Comparator adopts gas-gas push principle. the extra air sources give active power to pre-pressure for the whole calibrating system, perfectly instead of the heavy and complex hand work operation.

This instrument is easy to operate and very rapidly generate the required testing pressure, providing precise pressure control, only needs less than 5s to stabilize the pressure.

Following the points above mentioned, It's main features is in saving both effort and time, which is very suitable to do heavy & repeat calibration works.

## Functions:

ADPC-7015V is an ideal solution in the laboratory for calibrating pressure transmitters, pressure gauges, pressure switches & other industrial pressure instruments.

## Characteristics:

Fast stability, labor saving, simple operation

Small size, light weight

Non-leaking, convenient clean

## Technical Specification pf the device:

Pressure Range: (-0.95~0) bar

Working Media: air

Output Interface: M20×1.5 Female

Dimensions (L×W×H): 305mm×300mm×165 mm

Weight: 4.9Kg
