

Electric Comparator

information about ADPC-7016V Electric Comparator (Pneumatic):

- ✓ Electric Comparator adopts gas-gas push principle.
- ✓ the extra air sources give active power to pre-pressure for the whole calibrating system, perfectly instead of the heavy and complex hand work operation.
- ✓ This instrument is easy to operate and very rapidly generate the required testing pressure, providing precise pressure control, only needs less than 5s to stabilize the pressure.
- ✓ the points above mentioned, It's main features is in saving both effort and time, which is very suitable to do heavy & repeat calibration works.

Functions:

ADPC-7016V is an ideal solution in the laboratory for calibrating pressure transmitters, pressure gauge, pressure switches & other industrial pressure instruments.

Characteristics:

- Fast stability, labor saving, simple operation
- Small size, light weight
- Non-leaking, convenient clean

Technical Specification of the device:

- Pressure Range: (0~25) bar
- Working Media: air
- Output Interface: M20×1.5 Female
- Dimensions (L×W×H): 450mm×350mm×135 mm
- Weight: 14Kg
